Heartworm Preventative and Your Pet

- Monthly heartworm preventatives also kill zoonotic intestinal parasites and ectoparasites (i.e. fleas).
- Heartworm preventatives are not only for use in dogs, cats can get heartworms also. Cats, especially outdoor ones, should be on monthly heartworm preventive too!
- Heartworm preventative needs to be given/applied once every 30 days!
- The initial heartworm test (a simple and quick blood test) should take place when your pet is about year old at their next wellness exam and booster vaccinations.
